(Dis)Orienting Media and Narrative Mazes

(Dis)Orientation appears to be a phenomenon that is connected to media in numerous respects: today, finding your way in the world often means finding your way with the help of as well as *within* media, which in turn creates new virtual realms of (dis)orientation. This book deals with recent media technologies and structures (navigation devices, databases, transmediality) and unconventional narrative patterns (narrative complexity, plot twists, non-linearity), using the ambivalent concept of (dis)orientation as a shared focus to analyse various phenomena of contemporary media, thereby raising overarching questions about current mediascapes.

Julia Eckel (M.A.) is working on her PhD-thesis about anthropomorphic motifs in audiovisual media and their relevance for media theory. Her further research interest is non-linearity in film.

Bernd Leiendecker (M.A.) is working on his PhD-thesis on the history of unreliable narration in film. His research interests are narratology and the relationship between sports and media.

Daniela Olek (M.A.) is working as a support specialist for an IT-corporation. Her research interests are contemporary media narratology and visual communication.

Christine Piepiorka (Dipl./M.A.) writes a PhD-thesis about televisual complex narrations and resulting viewer concepts. Her further research interest is the spatial construction of serial environment.

Schlagworte: Disorientation/Orientation, Digital Media, Narrative Complexity, Navigation, Audiovisual Storytelling, Media, Internet, Space, Sociology of Media, Social Media, Media Studies
